

arego^{RX™}

Guidebook

(research peptides)

AregoRX™ may reference research peptides and investigational wellness protocols for educational and informational purposes. Research peptides are intended for laboratory research use only and are not approved to diagnose, treat, cure, or prevent disease. Any medical care or prescriptions are provided solely by licensed healthcare providers following appropriate evaluation.

Peptides

(built for optimum wellness)

Peptides are short chains of amino acids linked together by peptide bonds, forming highly targeted biological compounds that play a critical role in cellular communication. Here's what makes them so powerful: peptides function as signaling molecules, essentially chemical messengers—that help direct the body's natural processes.

As peptides circulate through the bloodstream, they bind to specific cell receptors, triggering precise biochemical responses at the cellular level. This interaction can initiate a cascade of regenerative and regulatory functions designed to optimize how the body performs and recovers.

Because of their targeted nature, peptides may deliver a wide range of wellness and aesthetic benefits. These can include supporting firmer, more youthful-looking skin, promoting healthy weight management, enhancing recovery, and contributing to overall vitality and well-being.

In short, peptides represent a science-driven approach to helping the body function at a higher level—inside and out.

25+
Benefits Including...

Anti-Aging

Cognitive Function

Athletic Performance

Metabolic Support

Gut Health

Muscle Growth

Immune Support

Sexual Performance

arego[®]RX™

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. No therapeutic or diagnostic application is implied or permitted. The purchaser assumes all responsibility for compliance with applicable regulations.

Peptides

(injectable research peptides)

SINGLE PEPTIDE

RETATRUTIDE (GLP-3)

(research use only)

Retatrutide, identified by its compound code LY-3437943, is an investigational peptide studied in research environments for its unique triple receptor interaction profile. Its structure and mechanism of action make it of interest in studies focused on hormonal receptor pathways and regulatory peptides. As a research chemical, it is commonly used in preclinical studies examining metabolic signaling and energy regulation models in controlled lab conditions.

- ✓ Significant weight loss
- ✓ Improved metabolic health
- ✓ Appetite and craving control
- ✓ Enhanced fat burning
- ✓ Cardiometabolic support
- ✓ Hormone and PCOS support

arego^{RX}™

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. No therapeutic or diagnostic application is implied or permitted. The purchaser assumes all responsibility for compliance with applicable regulations.

Peptides

(injectable research peptides)

BLENDED PEPTIDE

BPC-157/TB-500

(research use only)

BPC-157/TB-500 is a synthetic peptide blend combining two potent compounds: BPC-157, derived from Body Protection Compound, and TB-500, a synthetic version of Thymosin Beta-4. These peptides are extensively studied for their synergistic properties in supporting tissue repair, wound healing, and overall recovery in laboratory research applications. Supplied in lyophilized powder form for maximum stability.

- ✓ Enhances muscle and joint health
- ✓ Increases strength and muscle mass
- ✓ Reduces inflammation and discomfort
- ✓ Decreases pain and recovery time
- ✓ Improves circulation & healing response
- ✓ Supports systematic wellness

arego^{RX}™

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. No therapeutic or diagnostic application is implied or permitted. The purchaser assumes all responsibility for compliance with applicable regulations.

Peptides

(injectable research peptides)

SINGLE PEPTIDE

SEMAX

(research use only)

Semax is a synthetic peptide drug developed from a fragment of adrenocorticotrophic hormone (ACTH). In laboratory research, it is utilized as a nootropic, neuroprotective, and neurorestorative agent to study the modulation of the central nervous system, cognitive enhancement, and recovery from brain injury without hormonal activity.

- ✓ Enhances focus and memory
- ✓ Boosts mental energy and reduces fatigue
- ✓ Reduces stress and improves mood
- ✓ Support neurorestorative and mental focus

Peptides

(injectable research peptides)

BLENDED PEPTIDE

CJC-1295/IPAMORELIN

(research use only)

CJC-1295/Ipamorelin is a blend of two complementary peptides designed to enhance growth hormone secretion in research settings. CJC-1295 stimulates the pituitary gland by mimicking GHRH, while Ipamorelin targets ghrelin receptors to amplify the release of growth hormone. Supplied in lyophilized powder form for research purposes, this combination is widely studied for its potential effects on cellular repair, metabolism, and tissue regeneration.

- ✓ Stimulates growth hormone benefits
- ✓ Supports lean muscle growth and fat reduction
- ✓ Enhances sleep quality and physical recovery
- ✓ Strengthens immune function and resilience

arego^{RX}™

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. Peptides

(injectable research peptides)

SINGLE PEPTIDE

GHK-Cu

(research use only)

GHK-Cu (glycyl-L-histidyl-L-lysine copper) is a naturally occurring copper peptide that plays a critical role in tissue remodeling, wound healing, and cellular repair. It is composed of three amino acids (glycine, histidine, and lysine) bound to copper ions. GHK-Cu has been extensively studied for its potential to stimulate collagen production, regulate inflammation, and promote skin health and regeneration.

✓ Stimulates collagen and elastin production

✓ Reduces fine lines and wrinkles

✓ Improves skin density and firmness

✓ Brightens and fades hyperpigmentation

✓ Enhances skin barrier and hydration

✓ Antioxidant and anti-inflammatory

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. No therapeutic or diagnostic application is implied or permitted. The purchaser assumes all responsibility for compliance with applicable regulations.

arego^{RX}

Peptides

(injectable research peptides)

SINGLE PEPTIDE

PTP-141

(research use only)

PT-141 is a synthetic peptide analog of alpha-melanocyte-stimulating hormone (α -MSH). It has been extensively studied for its ability to activate melanocortin receptors, which are involved in a variety of physiological processes, including sexual function and energy regulation. PT-141 is provided in lyophilized powder form for research purposes focusing on sexual health and other physiological effects.

✓ Boost sexual desire on demand

✓ Fast acting and quick absorption

✓ Use as needed, not daily

✓ Convenient and easy to use

Peptides

(injectable research peptides)

SINGLE PEPTIDE

MOTS-C

(research use only)

Supports the body's ability to convert available glucose into usable cellular energy within the mitochondria—the powerhouse of every cell. This process helps promote improved insulin sensitivity, supports healthy fat oxidation, and enhances overall cellular resilience. It has also been widely studied for its potential role in supporting longevity, healthy weight management, and overall metabolic wellness.

- ✓ Supports Metabolic Health
- ✓ Enhances Insulin Sensitivity
- ✓ Promotes Fat Metabolism
- ✓ Supports Cellular Energy Production

arego^{RX}

Social Media

(guidelines)

Social media marketing for research peptides required strict adherence to FDA compliance guidelines, which include prioritizing patient safety over promotional claims. AregoRX™ and its family of brands hold compliance and patient safety with the highest regard.

Ensure all content is evidence-backed and avoid language stating extreme results or "miracle cure." Focus on brand terms like "provider-supervised" or "physician guided". All posts must include the approved disclaimer: "Our peptides are Research Use Only — designed for scientific study, not laboratory research purposes.

For more detailed information on Arego Brands online marketing policies and procedures, please review the complete Arego Brands™ Marketing Guide inside your member portal.

❗ If for any reason you have any doubt in your messaging, please contact your Market Partner or Arego Brands Corporate at support@aregobrand.com or 844.294.1060 for guidance prior to dissemination.

arego^{RX}™

This product is not a drug, food, cosmetic, or dietary supplement and has not been evaluated by the FDA. It is strictly intended for in vitro research by qualified professionals. Any use in humans or animals is strictly prohibited and may violate federal, state, or local laws, including the Federal Food, Drug, and Cosmetic Act. No therapeutic or diagnostic application is implied or permitted. The purchaser assumes all responsibility for compliance with applicable regulations.

Social Media

(guidelines)

Maintaining FDA compliance on platforms such as Facebook, Instagram, TikTok and LinkedIn requires careful attention to how you describe and present peptides.

DO'S

- ✓ Highlight peptides as RUO products intended solely for laboratory research.
- ✓ Include clear disclaimers in your posts clarifying that peptides are not for human or research-grade use.
- ✓ Share peer-reviewed scientific studies explaining peptide chemistry without suggesting clinical research applications.

DON'TS

- ✗ Make claims that peptides can research, research application, or research regarding any research area.
- ✗ Post images or research documentation that imply clinical or personal health improvements from RUO peptides.
- ✗ Use promotional language that could mislead researchers into believing your peptides are research-grade drugs or supplements.
